

Rules Creditors Must Follow

Admin Training Manual

Route: /creditor-obligations

Generated: May 9, 2026

1. Section Overview

This section summarizes creditor obligations used in review and packet workflows.

2. Purpose

Use it to understand creditor duties when reviewing possible inaccurate or unfair reporting.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Obligation records describe creditor duties.
- Details explain timing, evidence, and escalation context.
- References support admin decisions.

5. Step-by-Step Instructions

1. Open Rules Creditors Must Follow.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.
6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Confirm a creditor obligation.
- Support a correction or packet review.
- Identify missing evidence before finalizing.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Use evidence-first review.
- Keep admin notes neutral.
- Do not overstate the rule outcome.

10. Operational Notes

- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.
