

Platform Functions PDF

Admin Training Manual

Route: Sidebar footer download

Generated: May 9, 2026

1. Section Overview

The Platform Functions PDF export creates a downloadable reference guide for platform functions.

2. Purpose

Use this export when admins need an offline reference for platform capabilities.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Download button appears in the admin sidebar footer.
- The generated file opens as a PDF.
- The guide summarizes platform functions and operating context.

5. Step-by-Step Instructions

1. Open Platform Functions PDF.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.
6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Generate an offline function reference.
- Attach the PDF to approved internal training materials.
- Confirm PDF generation works after documentation changes.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Use current PDFs only.
- Do not distribute internal PDFs outside approved channels.

10. Operational Notes

- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.
