

Home Dashboard

Admin Training Manual

Route: /

Generated: May 9, 2026

1. Section Overview

The Home dashboard is the admin starting point for reviewing platform activity and opening operational tools.

2. Purpose

Use this page to orient yourself before working queues, user records, reports, or settings.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Summary cards show high-level activity.
- Navigation links open the main admin sections.
- Recent activity helps identify what needs attention first.

5. Step-by-Step Instructions

1. Open Home Dashboard.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.
6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Review platform status.
- Move to the correct admin section.
- Refresh after major work to confirm dashboard values update.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Do not use dashboard counts as the only proof that a workflow completed.

10. Operational Notes

- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.

User Management

Admin Training Manual

Route: /admin-user-management

Generated: May 9, 2026

1. Section Overview

User Management lists customer, support, and admin accounts with status and activity counts.

2. Purpose

Use this section to find users, review role and subscription state, create support agents, and perform approved reset workflows.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Search finds users by email or display name.
- Role filter narrows the list.
- Pagination shows the visible range and total matching users.
- User cards show plan, role, and activity counts.

5. Step-by-Step Instructions

1. Open User Management.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.

6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Find a user account.
- Confirm role and subscription status.
- Create a support agent when approved.
- Reset user data only for approved repair cases.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Never reset a user without written approval.
- Use exact email confirmation for sensitive actions.
- Setup links should point to the current environment.

10. Operational Notes

- Pagination now uses total record counts.
- Support-agent setup links are environment-aware after the 2026-05-09 repair.
- Screenshots are not embedded because live admin pages can expose user data. Add sanitized

screenshots from a seeded training tenant when available.

- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.

Risk Triage

Admin Training Manual

Route: /admin-risk-triage

Generated: May 9, 2026

1. Section Overview

Risk Triage helps admins review high-risk accounts, parser issues, and finding correction candidates.

2. Purpose

Use this section to decide which reports or accounts need manual review before customer-facing output is trusted.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Queue rows identify records that need review.
- Filters narrow by status, queue type, or severity.
- Actions link to parser review or finding correction workflows.

5. Step-by-Step Instructions

1. Open Risk Triage.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.
6. Refresh or reopen the page to confirm the result persisted.

7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Review high-risk items.
- Open correction workflow for a finding.
- Escalate parser defects.
- Confirm evidence before relying on a finding.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Do not finalize unsupported findings.
- Clear filters if an expected queue item is hidden.

10. Operational Notes

- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.

Rule Check Settings

Admin Training Manual

Route: /admin-compliance-config

Generated: May 9, 2026

1. Section Overview

Rule Check Settings controls detector thresholds, rule messaging, postal pricing, and limited production-mode settings.

2. Purpose

Use this section to tune how compliance findings are detected and explained.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Rule cards show each violation category.
- Threshold fields control sensitivity.
- Message fields control user-facing explanation text.
- Pricing fields control postal cost settings.

5. Step-by-Step Instructions

1. Open Rule Check Settings.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.

6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Adjust a detection threshold.
- Update customer-facing wording.
- Change postal pricing values.
- Reset unsaved changes.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Change one rule at a time.
- Use only valid non-negative pricing numbers.
- Run regression tests after meaningful rule changes.

10. Operational Notes

- Malformed postal pricing is rejected in both the UI and API.
- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.

- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.

Activity Logs

Admin Training Manual

Route: /admin-activity-logs

Generated: May 9, 2026

1. Section Overview

Activity Logs show important user and system actions across the platform.

2. Purpose

Use this section to confirm what happened, who performed an action, and when it occurred.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Filters narrow logs by user, action, status, or date.
- Rows show action, entity, actor, timestamp, and result.
- Pagination moves through older results.

5. Step-by-Step Instructions

1. Open Activity Logs.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.
6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Confirm a user action occurred.
- Review admin settings changes.
- Trace upload, login, packet, or reset activity.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Do not export or paste logs into public channels.
- Use exact timestamps in support notes.

10. Operational Notes

- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.

Error Logs

Admin Training Manual

Route: /admin-error-logs

Generated: May 9, 2026

1. Section Overview

Error Logs list application errors and failed operations that need operational review.

2. Purpose

Use this section to diagnose failed saves, imports, exports, parser failures, and API errors.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Severity filters separate warnings from critical errors.
- Search narrows by message, action, or user.
- Rows show the error time and context.

5. Step-by-Step Instructions

1. Open Error Logs.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.
6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Investigate failed API calls.
- Review parser or PDF extraction failures.
- Confirm whether a save failure was logged.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Do not expose stack traces to customers.
- Prioritize repeated critical errors.

10. Operational Notes

- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.

Security & Compliance

Admin Training Manual

Route: /admin-security

Generated: May 9, 2026

1. Section Overview

Security & Compliance contains audit log review, data retention controls, and semantic audit tools.

2. Purpose

Use this section to verify compliance controls and review retention or semantic-risk findings.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Audit Logs tab reviews recorded activity.
- Data Retention tab reviews and enforces retention rules.
- Semantic Audit tab checks records for policy-sensitive content.

5. Step-by-Step Instructions

1. Open Security & Compliance.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.
6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Review audit history.
- Check data retention status.
- Run semantic audit checks on approved scope.
- Export review results when required by policy.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Treat retention controls as destructive.
- Use the least necessary scope.
- Keep exported compliance files in approved storage only.

10. Operational Notes

- This section was hidden from the sidebar before the 2026-05-09 repair and is now discoverable.
- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.

Support Tickets

Admin Training Manual

Route: /support-tickets

Generated: May 9, 2026

1. Section Overview

Support Tickets organizes customer support issues and their operational status.

2. Purpose

Use this section to triage, respond to, and close customer support requests.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Ticket list shows subject, category, priority, and status.
- Filters narrow by status or priority.
- Ticket details show conversation and account context.

5. Step-by-Step Instructions

1. Open Support Tickets.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.
6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Assign or review a ticket.
- Find the related user account.
- Record the completed action.
- Close tickets only when the issue is resolved.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Keep notes factual and customer-safe.
- Do not include internal stack traces in replies.

10. Operational Notes

- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.

Admin Guide

Admin Training Manual

Route: /admin-knowledge-base

Generated: May 9, 2026

1. Section Overview

Admin Guide provides internal operating instructions and reference content.

2. Purpose

Use this section to learn standard workflows before changing settings or running sensitive tools.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Topic sections group operating guidance.
- PDF export makes the guide portable.
- Navigation helps locate a specific workflow.

5. Step-by-Step Instructions

1. Open Admin Guide.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.
6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Review a workflow before using it.
- Export the platform functions PDF.
- Find escalation guidance.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Do not add secrets or customer data to documentation.
- Report outdated content for update.

10. Operational Notes

- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.

Letter Templates

Admin Training Manual

Route: /admin-letter-templates

Generated: May 9, 2026

1. Section Overview

Letter Templates controls reusable text for dispute and support packet generation.

2. Purpose

Use this section to review and maintain approved template language.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Template list shows available templates.
- Template editor displays editable wording.
- Save controls persist approved changes.

5. Step-by-Step Instructions

1. Open Letter Templates.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.
6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Update approved wording.
- Review a template for plain language.
- Confirm a template still fits the intended workflow.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Avoid unsupported legal conclusions.
- Document why a template changed.

10. Operational Notes

- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.

Credit Reporting Companies

Admin Training Manual

Route: /bureaus

Generated: May 9, 2026

1. Section Overview

This section stores reference information about credit reporting companies.

2. Purpose

Use it to confirm bureau names, addresses, contacts, and operational details used by the platform.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Reference records list bureau details.
- Search or browse helps find a company.
- Details support packet and compliance workflows.

5. Step-by-Step Instructions

1. Open Credit Reporting Companies.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.
6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Confirm bureau contact information.
- Review bureau-specific handling notes.
- Check reference data before packet generation.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Do not manually change reference data without verification.
- Record the source for significant reference changes.

10. Operational Notes

- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.

Laws

Admin Training Manual

Route: /statutes

Generated: May 9, 2026

1. Section Overview

Laws provides statutory reference material used by compliance and dispute workflows.

2. Purpose

Use this section to understand which legal references support findings and templates.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Law records show statute names and summaries.
- Details provide jurisdiction and reference context.
- Related sections link to obligations and enforcement concepts.

5. Step-by-Step Instructions

1. Open Laws.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.
6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Confirm a statutory reference.
- Review jurisdiction-specific context.
- Support an admin correction decision.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Do not give legal advice to customers.
- Use references as operational support only.

10. Operational Notes

- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.

Reporting Format Guide

Admin Training Manual

Route: /metro2-compliance

Generated: May 9, 2026

1. Section Overview

Reporting Format Guide explains credit-reporting format expectations and Metro 2 style data concepts.

2. Purpose

Use this section to interpret fields and formatting issues during parser and rule review.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Guide content groups field and reporting concepts.
- Reference entries support parser mapping decisions.
- Examples help identify malformed report data.

5. Step-by-Step Instructions

1. Open Reporting Format Guide.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.
6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Review field meaning.
- Support parser mapping decisions.
- Explain why a report field may be inconsistent.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Separate format issues from legal violation findings.
- Use exact field names when documenting defects.

10. Operational Notes

- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.

Rules Creditors Must Follow

Admin Training Manual

Route: /creditor-obligations

Generated: May 9, 2026

1. Section Overview

This section summarizes creditor obligations used in review and packet workflows.

2. Purpose

Use it to understand creditor duties when reviewing possible inaccurate or unfair reporting.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Obligation records describe creditor duties.
- Details explain timing, evidence, and escalation context.
- References support admin decisions.

5. Step-by-Step Instructions

1. Open Rules Creditors Must Follow.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.
6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Confirm a creditor obligation.
- Support a correction or packet review.
- Identify missing evidence before finalizing.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Use evidence-first review.
- Keep admin notes neutral.
- Do not overstate the rule outcome.

10. Operational Notes

- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.

Rules Credit Reporting Companies Must Follow

Admin Training Manual

Route: /bureau-obligations

Generated: May 9, 2026

1. Section Overview

This section summarizes credit reporting company obligations.

2. Purpose

Use it to review bureau duties for accuracy, investigation, and correction workflows.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Obligation list shows bureau responsibilities.
- Details support evidence and escalation decisions.
- References align with dispute packet workflows.

5. Step-by-Step Instructions

1. Open Rules Credit Reporting Companies Must Follow.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.

6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Confirm bureau obligations.
- Review dispute response responsibilities.
- Support evidence linking.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Confirm the bureau name in the report.
- Do not combine separate obligations into one finding.

10. Operational Notes

- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.

Rules Collectors Must Follow

Admin Training Manual

Route: /collector-obligations

Generated: May 9, 2026

1. Section Overview

This section summarizes collector obligations used in collection-account review.

2. Purpose

Use it to evaluate collection reporting, payment acknowledgement, and dispute handling issues.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Collector obligation records show duties and examples.
- Details help identify required evidence.
- References support correction review.

5. Step-by-Step Instructions

1. Open Rules Collectors Must Follow.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.
6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Review collector reporting duties.
- Confirm evidence for a collector issue.
- Support escalation when a response is inadequate.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Separate collector duties from bureau duties.
- Use clear evidence excerpts.
- Avoid unsupported conclusions.

10. Operational Notes

- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.

Enforcement

Admin Training Manual

Route: /enforcement-mechanisms

Generated: May 9, 2026

1. Section Overview

Enforcement summarizes available regulatory or procedural enforcement paths.

2. Purpose

Use this section to understand escalation options and operational context.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Records describe enforcement mechanisms.
- Details explain when a mechanism may apply.
- References connect to laws and obligations.

5. Step-by-Step Instructions

1. Open Enforcement.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.
6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Review escalation options.
- Support internal triage.
- Understand possible next steps after failed correction.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Keep enforcement notes internal unless approved.
- Use cautious language.
- Verify jurisdiction before relying on an entry.

10. Operational Notes

- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.

Regulatory Updates

Admin Training Manual

Route: /regulatory-updates

Generated: May 9, 2026

1. Section Overview

Regulatory Updates tracks changes that may affect platform rules, references, and workflows.

2. Purpose

Use this section to review and apply approved regulatory knowledge updates.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Update list shows pending or historical regulatory changes.
- Details explain source, scope, and affected areas.
- Actions support review and operational follow-up.

5. Step-by-Step Instructions

1. Open Regulatory Updates.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.
6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Review new regulatory changes.
- Identify affected rule categories.
- Coordinate updates to templates, settings, or references.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Do not change rules based on unverified updates.
- Re-test affected workflows after rule changes.

10. Operational Notes

- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.

Lifecycle Testing

Admin Training Manual

Route: /admin-mock-lifecycle

Generated: May 9, 2026

1. Section Overview

Lifecycle Testing runs controlled mock-user workflows for end-to-end validation.

2. Purpose

Use this section to test the platform lifecycle without using a real customer account.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Controls create or manage mock lifecycle runs.
- Run output shows each stage and result.
- Cleanup actions remove mock test data when approved.

5. Step-by-Step Instructions

1. Open Lifecycle Testing.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.
6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Run a mock user lifecycle.
- Validate upload-to-packet flow.
- Confirm cleanup behavior.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Use only disposable mock accounts.
- Do not run cleanup against a real user.

10. Operational Notes

- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.

Parser Testing

Admin Training Manual

Route: /admin-parser-testing

Generated: May 9, 2026

1. Section Overview

Parser Testing validates credit report extraction, saved test cases, parser output, and finding corrections.

2. Purpose

Use this section to confirm report ingestion and extraction behave correctly before relying on findings.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Test case list stores sample reports.
- Parser controls execute extraction.
- Saved output panels compare expected and actual results.
- Finding Corrections tab lets admins correct extracted findings.

5. Step-by-Step Instructions

1. Open Parser Testing.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.
6. Refresh or reopen the page to confirm the result persisted.

7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Run parser regression cases.
- Review extracted tradelines.
- Compare saved output.
- Delete obsolete test cases only when approved.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Keep test cases sanitized.
- Use deterministic fixtures for regression checks.
- Escalate recurring parser failures with the test case ID.

10. Operational Notes

- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.

Finding Corrections

Admin Training Manual

Route: /admin-parser-testing?tab=violation-corrections

Generated: May 9, 2026

1. Section Overview

Finding Corrections is the admin truth-layer for reviewing, correcting, rejecting, or finalizing extracted findings.

2. Purpose

Use this section when a machine finding needs human review, evidence linking, regulation mapping, or training feedback.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Run list shows extraction runs and finding counts.
- Tradelist shows accounts in the run.
- Original Extraction shows machine findings.
- Admin Correction stores corrected status and notes.
- Evidence and Regulation Mapping panels support finalized findings.

5. Step-by-Step Instructions

1. Open Finding Corrections.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.

5. Complete one action at a time.
6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Confirm a correct machine finding.
- Correct a partially wrong finding.
- Reject a false positive.
- Add a missed issue.
- Mark a training note only.
- Verify or mark regulation references incorrect.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Finalize only when evidence and regulation requirements are satisfied.
- Use the trash icon only for delete actions.
- Keep reviewer notes factual.

10. Operational Notes

- Reference status actions are visually distinct after the 2026-05-09 repair.
- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.

Parser Mappings

Admin Training Manual

Route: /admin-parser-mappings

Generated: May 9, 2026

1. Section Overview

Parser Mappings controls how report text fields are interpreted and assigned to platform fields.

2. Purpose

Use this section to review and maintain mapping rules that support deterministic extraction.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Mapping list shows known field mappings.
- Search and filters narrow by bureau or field.
- Actions update mapping status or details.

5. Step-by-Step Instructions

1. Open Parser Mappings.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.
6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Find a mapping.
- Review field normalization.
- Correct a stale mapping.
- Confirm a parser rule after a report format change.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Avoid broad mapping changes without fixture coverage.
- Escalate conflicting mappings before saving.

10. Operational Notes

- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.

AI Assist

Admin Training Manual

Route: /admin-ai-assist

Generated: May 9, 2026

1. Section Overview

AI Assist helps admins draft operational summaries and investigate support or compliance context.

2. Purpose

Use this section for internal assistance, not as a replacement for evidence review or admin judgment.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Prompt area accepts admin questions.
- Response area returns assistance for selected context.
- Controls manage submission and review.

5. Step-by-Step Instructions

1. Open AI Assist.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.
6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Summarize a support issue.
- Draft internal notes.
- Identify possible next review steps.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Do not paste secrets or reset links.
- Verify important facts in the source record before acting.

10. Operational Notes

- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.

Version Management

Admin Training Manual

Route: /admin-version-management

Generated: May 9, 2026

1. Section Overview

Version Management tracks releases, migration status, and feature flags.

2. Purpose

Use this section to understand release state and manage feature availability under approved change control.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Versions tab lists release records.
- Migrations tab shows migration metadata and status.
- Feature Flags tab controls staged feature access.

5. Step-by-Step Instructions

1. Open Version Management.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.
6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Review current release version.
- Mark migration metadata after verification.
- Enable or disable a feature flag for an approved audience.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Migration status buttons do not execute SQL.
- Use change approval before altering feature flags.

10. Operational Notes

- Migration buttons now say Mark Applied and Mark Rolled Back to match metadata-only behavior.
- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.

Platform Functions PDF

Admin Training Manual

Route: Sidebar footer download

Generated: May 9, 2026

1. Section Overview

The Platform Functions PDF export creates a downloadable reference guide for platform functions.

2. Purpose

Use this export when admins need an offline reference for platform capabilities.

3. Access Requirements

- Sign in with an account that has admin access.
- Use the staging or production URL assigned by operations.
- Do not share admin sessions, reset links, exported files, or customer records.
- If access is denied, confirm the account role before retrying the workflow.

4. Main Dashboard Overview

- Download button appears in the admin sidebar footer.
- The generated file opens as a PDF.
- The guide summarizes platform functions and operating context.

5. Step-by-Step Instructions

1. Open Platform Functions PDF.
2. Confirm you are in the correct environment.
3. Apply the needed search, filter, tab, or selection.
4. Review the displayed information before making changes.
5. Complete one action at a time.
6. Refresh or reopen the page to confirm the result persisted.
7. Check Activity Logs or Error Logs when confirmation is unclear.

6. Common Tasks

- Generate an offline function reference.
- Attach the PDF to approved internal training materials.
- Confirm PDF generation works after documentation changes.

7. Common Errors

- Page does not load or shows access denied.
- Search or filters hide the expected record.
- Save does not persist after refresh.
- A required field, evidence item, or approval is missing.

8. Troubleshooting

- Refresh once and retry the exact action.
- Clear filters and search again.
- Confirm the account has admin access.
- Check Activity Logs for successful actions and Error Logs for failures.
- Stop and escalate if the workflow could change live customer data unexpectedly.

9. Best Practices

- Work from the least risky action to the most sensitive action.
- Use exact emails, IDs, and timestamps when reviewing records.
- Keep notes short, factual, and customer-safe.
- Use current PDFs only.
- Do not distribute internal PDFs outside approved channels.

10. Operational Notes

- Screenshots are not embedded because live admin pages can expose user data. Add sanitized screenshots from a seeded training tenant when available.
- A task is complete only when the page shows the expected saved state, a refresh keeps the state, and related logs or downstream records agree with the change.
