

Rules Creditors Must Follow

Admin Operations and Configuration Manual

Manual 14 of 25
Route: /creditor-obligations
Group: Legal & Rules
Generated: May 10, 2026

1. Section Overview

Rules Creditors Must Follow summarizes creditor duties used in review, correction, dispute packet, and compliance workflows.

Use this section to understand creditor responsibilities when reviewing inaccurate, incomplete, unfair, stale, or unsupported account reporting.

2. Current Admin Screenshot

Screenshot source: localhost development admin environment with test data. Test data is permitted for these manuals and should still be treated as internal.

The screenshot shows creditor obligation records, summaries, detail panels, and references.

3. Access and Operating Rules

- Sign in with an account that has admin access. Support users may see some reference sections, but admin configuration and review tools require admin role.
- Use the intended environment. Local admin browser testing uses `http://localhost:5175`. The backend port, `http://localhost:3333`, is API-only.
- Treat screenshots, exports, logs, report text, and record IDs as internal test-environment material. Do not paste them into public channels.
- Confirm the page route, active filters, selected user, selected report, and selected environment before any save, delete, reset, dismissal, or finalize action.
- When an action affects customer-facing findings, packets, pricing, feature flags, or parser truth, record the reason and verify the downstream record after refresh.
- Creditor obligations are separate from bureau and collector obligations.
- Do not combine multiple duties into one vague finding.
- Evidence should identify the creditor/furnisher action or omission.

4. Screen Anatomy and Controls

Area	What it means	Admin procedure
Obligation list	Shows creditor duties and related issue areas.	Find the obligation that matches the account and evidence.
Details	Explain timing, evidence, and operational context.	Use details to decide what evidence is required.
References	Connect obligations to laws or internal guide content.	Verify authority before finalizing a finding.

5. Step-by-Step Instructions

Confirm a creditor obligation

Use when a finding or packet claim depends on what a creditor/furnisher must do.

Procedure

1. Open Rules Creditors Must Follow.
2. Search or browse for the duty that matches the issue, such as accuracy, update timing, documentation, or response quality.
3. Read the duty, evidence requirements, and related references.
4. Compare to the source account, creditor name, dates, and bureau records.
5. Open Laws if the obligation requires citation support.
6. Use the obligation only if the source record shows the creditor-specific issue.

Verification

- Creditor identity and duty match the source evidence.
- The finding note does not assign bureau/collector duties to the creditor.

Support a correction or packet review

Use when a creditor issue may appear in a dispute packet.

Procedure

1. Open the affected tradeline or finding correction.
2. Identify the creditor/furnisher, account number mask, status, dates, and evidence excerpt.
3. Open the relevant creditor obligation.
4. Confirm whether the obligation supports a challenge, correction request, or training note only.
5. If supported, ensure packet/template wording stays factual and does not overstate the conclusion.
6. If unsupported, reject or reclassify the finding rather than forcing the creditor obligation.

Verification

- Packet or correction language is backed by creditor-specific evidence.

6. Common Tasks With Drilldown Examples**Identify missing evidence**

Example: A stale-reporting finding names a creditor but the source lacks update dates.

Drilldown procedure

1. Open the source account and inspect date fields, status, and raw text.
2. Open creditor obligations for the issue type.
3. List which evidence elements are present and which are missing.
4. If the missing element is in source text but not parsed, open Parser Testing.
5. If the missing element is not reported, treat the finding cautiously and document uncertainty.

Best practices for this task

- Do not finalize when required creditor evidence is missing.
- Escalate parser gaps separately from unsupported findings.

Done when

- Evidence gap is documented and routed correctly.

Keep admin notes neutral

Example: A creditor appears to have reported inconsistent status.

Drilldown procedure

1. Describe the observed data: creditor, account, bureau, dates, status values.

2. Reference the relevant obligation without declaring intent or misconduct.
3. State what must be verified next.
4. Use confirmed violation language only if evidence and authority both support it.

Best practices for this task

- Avoid words that imply motive.
- Separate possible issue from confirmed finding.

Done when

- The note is factual, source-backed, and escalation-ready.

7. Configuration and Change-Control Scope

- Reference data can support finding mapping and packet language.
- Updates require verified authority and operational review.
- Obligation pages inform decisions but do not themselves change findings.

8. Common Errors

Problem	Likely cause	Admin response
Access denied or redirected to login	The session expired, the role is not admin, or the wrong environment is open.	Sign back in, confirm admin role, and reopen the route from the sidebar instead of using an old bookmark.
Expected record is missing	Search terms, tabs, filters, pagination, or environment selection are hiding the record.	Clear filters, search by exact ID or email, verify the environment, and compare Activity Logs when available.
Save appears to do nothing	Required fields are missing, there are no dirty changes, or the API returned a validation error.	Read the inline validation text, correct one field at a time, save again, refresh, and check Error Logs if the state still does not persist.
creditor obligations state conflicts with another page	The source record was changed elsewhere or the current page is stale.	Refresh the page, reopen the source record, and use timestamps or record IDs to decide which state is authoritative.

9. Troubleshooting

Check	Why it matters	How to proceed
Start with a refresh	A refresh confirms whether the creditor obligations view is stale or whether the backend rejected the action.	Refresh once, then repeat the exact search or selection. Do not repeat destructive actions until the latest state is visible.
Check Activity Logs	Successful admin actions should leave an audit trail for sensitive workflows.	Search by actor, affected user, entity ID, route, or timestamp. Use the log entry as confirmation, not

Check	Why it matters	How to proceed
		just the toast message.
Check Error Logs	Repeated UI failures usually have matching server or API errors.	Search around the action time. Capture the route, status, error summary, and request context for developer follow-up.
Escalate with evidence	Developer review is faster when the exact record and reproduction path are known.	Provide environment, route, selected filters, record ID, expected outcome, actual outcome, screenshot, and timestamp.

10. Best Practices

- Match the duty to the correct actor.
- Use evidence-first review.
- Avoid unsupported legal conclusions.
- Keep notes neutral and exact.

11. Completion Checklist

- The creditor obligations page was reopened or refreshed after the change.
- The expected saved state remained visible after refresh.
- Related logs, downstream records, or generated artifacts agree with the visible page state.
- Any customer-facing wording, finding status, packet state, or support note was reviewed for factual and neutral language.
- Any unresolved risk, failed test, suspicious log, or unclear source evidence was escalated with record IDs and screenshots.
