

Rules Credit Reporting Companies Must Follow

Admin Operations and Configuration Manual

Manual 15 of 25

Route: /bureau-obligations

Group: Legal & Rules

Generated: May 10, 2026

1. Section Overview

Rules Credit Reporting Companies Must Follow summarizes bureau duties for reporting accuracy, investigation, correction, and dispute handling.

Use this section to review bureau-specific responsibilities and determine whether evidence supports bureau-focused correction, escalation, or packet language.

2. Current Admin Screenshot

Screenshot source: localhost development admin environment with test data. Test data is permitted for these manuals and should still be treated as internal.

The screenshot shows bureau obligation entries, details, and reference context.

3. Access and Operating Rules

- Sign in with an account that has admin access. Support users may see some reference sections, but admin configuration and review tools require admin role.
- Use the intended environment. Local admin browser testing uses `http://localhost:5175`. The backend port, `http://localhost:3333`, is API-only.
- Treat screenshots, exports, logs, report text, and record IDs as internal test-environment material. Do not paste them into public channels.
- Confirm the page route, active filters, selected user, selected report, and selected environment before any save, delete, reset, dismissal, or finalize action.
- When an action affects customer-facing findings, packets, pricing, feature flags, or parser truth, record the reason and verify the downstream record after refresh.
- Bureau obligations are not the same as creditor or collector obligations.
- Confirm which bureau reported the data and whether the issue appears across bureaus.
- Do not combine separate bureau duties into one finding without separate evidence.

4. Screen Anatomy and Controls

Area	What it means	Admin procedure
------	---------------	-----------------

Area	What it means	Admin procedure
Obligation list	Shows bureau responsibilities.	Choose the duty that matches the bureau behavior, not the creditor behavior.
Details	Explain evidence, timing, and escalation context.	Use when checking dispute response or correction obligations.
References	Connect to laws and broader compliance context.	Verify jurisdiction and source before citation mapping.

5. Step-by-Step Instructions

Confirm a bureau obligation

Use when the issue is about credit reporting company investigation, correction, or reporting behavior.

Procedure

1. Open Rules Credit Reporting Companies Must Follow.
2. Find the obligation matching the issue type: accuracy, reinvestigation, correction, disclosure, or dispute handling.
3. Confirm the bureau name in the source report or packet.
4. Compare the obligation to the evidence and timeline.
5. Open Laws for citation support if the finding will be finalized or mapped.
6. Document bureau-specific facts separately from creditor facts.

Verification

- The bureau duty and source bureau match.
- Evidence supports the action chosen in Finding Corrections or packet review.

Review dispute response responsibilities

Use when a dispute response appears incomplete or inconsistent.

Procedure

1. Open the user's dispute/packet or evidence timeline.
2. Identify the bureau, sent date, response date, and response content.
3. Open bureau obligations related to investigation and correction.
4. Compare timing and content to the obligation details.
5. Open Enforcement if escalation options are being considered.
6. Document exact dates and source excerpts.

Verification

- Response review has exact dates and bureau identity.
- Any escalation path is supported by obligation and evidence context.

6. Common Tasks With Drilldown Examples

Separate cross-bureau inconsistency from bureau duty

Example: One bureau reports a balance that another bureau does not.

Drilldown procedure

1. Open the account comparison or source records.
2. Identify each bureau and field value.
3. Use Reporting Format Guide to confirm field meaning.
4. Use bureau obligations to decide whether the issue is bureau reporting/investigation behavior.
5. Use creditor obligations if the problem is furnisher data supplied across bureaus.

Best practices for this task

- Cross-bureau difference is an evidence pattern, not automatically a bureau violation.
- Map each duty to the actor responsible for the behavior.

Done when

- The finding category and obligation actor are aligned.

Document bureau evidence

Example: A bureau failed to update an account after a correction.

Drilldown procedure

1. Record bureau name, report date, account, field, and observed value.
2. Record correction or dispute evidence that should have changed the value.
3. Open bureau obligations and identify the matching duty.
4. Link or cite the source evidence in the correction workflow.
5. Avoid broad claims about all bureaus if only one bureau is affected.

Best practices for this task

- Be precise about bureau-specific facts.
- Do not merge multi-bureau issues unless each bureau has evidence.

Done when

- Evidence links match the bureau and account under review.

7. Configuration and Change-Control Scope

- Reference data informs finding correction and packet review.
- Obligation records should stay current with verified references.
- This page does not directly change detector behavior.

8. Common Errors

Problem	Likely cause	Admin response
Access denied or redirected to login	The session expired, the role is not admin, or the wrong environment is open.	Sign back in, confirm admin role, and reopen the route from the sidebar instead of using an old bookmark.
Expected record is missing	Search terms, tabs, filters, pagination, or environment selection are hiding the record.	Clear filters, search by exact ID or email, verify the environment, and compare Activity Logs when available.
Save appears to do nothing	Required fields are missing, there are no dirty changes, or the API returned a validation error.	Read the inline validation text, correct one field at a time, save again, refresh, and check Error Logs if the state still does not persist.
bureau obligations state conflicts with another page	The source record was changed elsewhere or the current page is stale.	Refresh the page, reopen the source record, and use timestamps or record IDs to decide which state is authoritative.

9. Troubleshooting

Check	Why it matters	How to proceed
Start with a refresh	A refresh confirms whether the bureau obligations view is stale or whether the backend rejected the action.	Refresh once, then repeat the exact search or selection. Do not repeat destructive actions until the latest state is visible.
Check Activity Logs	Successful admin actions should leave an audit trail for sensitive workflows.	Search by actor, affected user, entity ID, route, or timestamp. Use the log entry as confirmation, not just the toast message.
Check Error Logs	Repeated UI failures usually have matching server or API errors.	Search around the action time. Capture the route, status, error summary, and request context for developer follow-up.
Escalate with evidence	Developer review is faster when the exact record and reproduction path are known.	Provide environment, route, selected filters, record ID, expected outcome, actual outcome, screenshot, and timestamp.

10. Best Practices

- Confirm the bureau name in the source record.
- Keep bureau duties separate from creditor and collector duties.
- Use exact dates for investigation and correction timelines.
- Map citations only when authority and jurisdiction align.

11. Completion Checklist

- The bureau obligations page was reopened or refreshed after the change.
- The expected saved state remained visible after refresh.
- Related logs, downstream records, or generated artifacts agree with the visible page state.
- Any customer-facing wording, finding status, packet state, or support note was reviewed for factual and neutral language.
- Any unresolved risk, failed test, suspicious log, or unclear source evidence was escalated with record IDs and screenshots.
