

Rules Collectors Must Follow

Admin Operations and Configuration Manual

Manual 16 of 25
Route: /collector-obligations
Group: Legal & Rules
Generated: May 10, 2026

1. Section Overview

Rules Collectors Must Follow summarizes collection-account duties used in collection reporting, payment acknowledgement, dispute handling, and escalation review.

Use this section to evaluate collection-specific reporting and dispute issues without confusing collector duties with creditor or bureau obligations.

2. Current Admin Screenshot

Screenshot source: localhost development admin environment with test data. Test data is permitted for these manuals and should still be treated as internal.

The screenshot shows collector obligation entries, examples, and related details.

3. Access and Operating Rules

- Sign in with an account that has admin access. Support users may see some reference sections, but admin configuration and review tools require admin role.
- Use the intended environment. Local admin browser testing uses `http://localhost:5175`. The backend port, `http://localhost:3333`, is API-only.
- Treat screenshots, exports, logs, report text, and record IDs as internal test-environment material. Do not paste them into public channels.
- Confirm the page route, active filters, selected user, selected report, and selected environment before any save, delete, reset, dismissal, or finalize action.
- When an action affects customer-facing findings, packets, pricing, feature flags, or parser truth, record the reason and verify the downstream record after refresh.
- Collection-account evidence often involves assignment dates, payment acknowledgement, dispute notices, and collector identity.
- Separate original creditor, collector, and bureau behavior.
- Use cautious language when source account ownership is unclear.

4. Screen Anatomy and Controls

Area	What it means	Admin procedure
Collector obligation records	Show duties and examples tied to collection accounts.	Use only when the source account involves a collector or collection behavior.
Details/evidence guidance	Explain required context and examples.	Identify what source evidence is needed before finalizing.
References	Connect collector duties to law or enforcement concepts.	Verify citation before mapping.

5. Step-by-Step Instructions

Review collector reporting duties

Use when a finding concerns a collection account or collector behavior.

Procedure

1. Open Rules Collectors Must Follow.
2. Find the obligation matching the issue: reporting accuracy, payment acknowledgement, disputed debt handling, assignment, or communication.
3. Open the source tradeline and confirm the account is actually a collection account.
4. Identify collector name, original creditor if present, account number mask, balance, dates, and reported status.
5. Compare the source evidence to the obligation.

6. Open Laws or Enforcement only if citation or escalation review is needed.

Verification

- The duty is collector-specific.
- Source account identity and collection status are clear.

Support escalation after inadequate response

Use when a collector response appears incomplete, stale, or inconsistent.

Procedure

1. Open support/evidence records and identify the response date and content.
2. Open collector obligations for the relevant duty.
3. Compare response content to the source dispute or evidence request.
4. Open Enforcement to understand possible escalation mechanisms.
5. Document exact source excerpts and avoid assumptions about intent.
6. Route for compliance review if the escalation path is uncertain.

Verification

- Escalation note is source-backed and actor-specific.

6. Common Tasks With Drilldown Examples

Confirm evidence for a collector issue

Example: A finding says a collector did not acknowledge payment.

Drilldown procedure

1. Open the source account and evidence records.
2. Confirm collector identity and payment/event dates.
3. Check whether the source report actually shows payment acknowledgement or absence.
4. Use collector obligations to identify the duty and evidence required.
5. If evidence is missing from parser output but present in source text, create a parser correction.

Best practices for this task

- Do not infer collector behavior from a creditor-only account.
- Keep payment/event evidence exact.

Done when

- Collector finding has source evidence or is held for further review.

Separate collector and bureau duties

Example: A collection account appears on a bureau report with an incorrect balance.

Drilldown procedure

1. Identify who supplied or displayed the incorrect data when possible.
2. Open collector obligations if collector reporting behavior is at issue.
3. Open bureau obligations if investigation/correction display behavior is at issue.
4. Record which actor the finding applies to.
5. Use separate findings or notes when both actors have distinct issues.

Best practices for this task

- One source record can involve multiple actors, but each duty needs separate evidence.

Done when

- Admin note identifies actor, duty, and evidence separately.

7. Configuration and Change-Control Scope

- Reference records inform corrections and packet language.
- Changes require verified authority.
- This section does not directly change detector rules.

8. Common Errors

Problem	Likely cause	Admin response
Access denied or redirected to login	The session expired, the role is not admin, or the wrong environment is open.	Sign back in, confirm admin role, and reopen the route from the sidebar instead of using an old bookmark.
Expected record is missing	Search terms, tabs, filters, pagination, or environment selection are hiding the record.	Clear filters, search by exact ID or email, verify the environment, and compare Activity Logs when available.
Save appears to do nothing	Required fields are missing, there are no dirty changes, or the API returned a validation error.	Read the inline validation text, correct one field at a time, save again, refresh, and check Error Logs if the state still does not persist.
collector obligations state conflicts with another page	The source record was changed elsewhere or the current page is stale.	Refresh the page, reopen the source record, and use timestamps or record IDs to decide which state is authoritative.

9. Troubleshooting

Check	Why it matters	How to proceed
Start with a refresh	A refresh confirms whether the collector obligations view is stale or whether the backend rejected the action.	Refresh once, then repeat the exact search or selection. Do not repeat destructive actions until the latest state is visible.

Check	Why it matters	How to proceed
Check Activity Logs	Successful admin actions should leave an audit trail for sensitive workflows.	Search by actor, affected user, entity ID, route, or timestamp. Use the log entry as confirmation, not just the toast message.
Check Error Logs	Repeated UI failures usually have matching server or API errors.	Search around the action time. Capture the route, status, error summary, and request context for developer follow-up.
Escalate with evidence	Developer review is faster when the exact record and reproduction path are known.	Provide environment, route, selected filters, record ID, expected outcome, actual outcome, screenshot, and timestamp.

10. Best Practices

- Confirm the account is collection-related before using collector duties.
- Separate collector, creditor, and bureau actors.
- Use exact payment, dispute, assignment, and response dates.
- Avoid unsupported conclusions about intent.

11. Completion Checklist

- The collector obligations page was reopened or refreshed after the change.
- The expected saved state remained visible after refresh.
- Related logs, downstream records, or generated artifacts agree with the visible page state.
- Any customer-facing wording, finding status, packet state, or support note was reviewed for factual and neutral language.
- Any unresolved risk, failed test, suspicious log, or unclear source evidence was escalated with record IDs and screenshots.
