

Platform Functions PDF

Admin Operations and Configuration Manual

Manual 25 of 25
Route: Sidebar footer download
Group: Tools
Generated: May 10, 2026

1. Section Overview

Platform Functions PDF is the sidebar footer export that generates a downloadable reference guide for platform functions and operating context.

Use this export when admins need an offline internal reference for platform capabilities, training, or workflow review.

2. Current Admin Screenshot

Screenshot source: localhost development admin environment with test data. Test data is permitted for these manuals and should still be treated as internal.

The screenshot shows the sidebar footer Platform Functions button used to generate the PDF.

3. Access and Operating Rules

- Sign in with an account that has admin access. Support users may see some reference sections, but admin configuration and review tools require admin role.
- Use the intended environment. Local admin browser testing uses `http://localhost:5175`. The backend port, `http://localhost:3333`, is API-only.
- Treat screenshots, exports, logs, report text, and record IDs as internal test-environment material. Do not paste them into public channels.
- Confirm the page route, active filters, selected user, selected report, and selected environment before any save, delete, reset, dismissal, or finalize action.
- When an action affects customer-facing findings, packets, pricing, feature flags, or parser truth, record the reason and verify the downstream record after refresh.
- Use current PDFs only. Regenerate after documentation, navigation, or workflow changes.
- Do not distribute internal PDFs outside approved channels.
- The PDF may contain internal operational descriptions and should be handled as internal training material.

4. Screen Anatomy and Controls

Area	What it means	Admin procedure
Sidebar footer button	Downloads the Platform Functions PDF.	Use after confirming the current app build and documentation are up to date.
Generated PDF	Contains internal reference content.	Open and inspect the generated file before sharing internally.
Toast/error handling	Shows download failure or success context.	Check Error Logs if generation fails.

5. Step-by-Step Instructions

Generate an offline function reference

Use when onboarding admins or validating documentation after a release.

Procedure

1. Open the admin app and confirm you are signed in as admin.
2. Scroll or look to the sidebar footer.
3. Click Platform Functions.
4. Wait for the PDF download process to complete.
5. Open the generated PDF and confirm title, date/context, and expected sections.
6. Store the PDF only in approved internal training storage.

Verification

- PDF opens without corruption.
- Content reflects current platform functions.

Diagnose a PDF download failure

Use when the sidebar button shows an error or no file downloads.

Procedure

1. Click the button once and wait for the loading spinner to finish.
2. Read the error toast if present.
3. Open Error Logs and search by PDF/export/platform-functions context.
4. Check Activity Logs if the export action is audited.
5. Retry once after refresh if the error appears transient.
6. Escalate repeated failures with route, timestamp, screenshot, and error summary.

Decision options

- A working PDF is generated or the failure is escalated with evidence.

Verification

- Transient failure: refresh and retry once.
- Repeated failure: escalate with logs.
- Content issue: regenerate after source documentation is corrected.

6. Common Tasks With Drilldown Examples

Attach to approved internal training

Example: A new admin onboarding checklist references the Platform Functions PDF.

Drilldown procedure

1. Generate the PDF from the current app.
2. Open it and verify it matches current navigation and feature names.
3. Store it in approved internal training material.
4. Record the generation date and app version if available.
5. Replace older copies when a new version is generated.

Best practices for this task

- Do not use stale exports for training.
- Do not place internal PDFs in public or customer-facing storage.

Done when

- Training material references the current PDF.

Verify after documentation changes

Example: Admin manuals were rebuilt and the export should still work.

Drilldown procedure

1. Run the documentation generation step.

2. Open the app and click Platform Functions.
3. Open the downloaded PDF.
4. Check for missing sections, broken formatting, or stale labels.
5. If the export depends on source helper content, update the source and regenerate.

Best practices for this task

- PDF generation should be part of documentation release checks.

Done when

- The generated PDF opens and content is current.

7. Configuration and Change-Control Scope

- The export does not change application data.
- The generated file can become stale after feature or workflow changes.
- Failures usually indicate PDF generation, network, or endpoint problems.

8. Common Errors

Problem	Likely cause	Admin response
Access denied or redirected to login	The session expired, the role is not admin, or the wrong environment is open.	Sign back in, confirm admin role, and reopen the route from the sidebar instead of using an old bookmark.
Expected record is missing	Search terms, tabs, filters, pagination, or environment selection are hiding the record.	Clear filters, search by exact ID or email, verify the environment, and compare Activity Logs when available.
Save appears to do nothing	Required fields are missing, there are no dirty changes, or the API returned a validation error.	Read the inline validation text, correct one field at a time, save again, refresh, and check Error Logs if the state still does not persist.
platform functions PDF state conflicts with another page	The source record was changed elsewhere or the current page is stale.	Refresh the page, reopen the source record, and use timestamps or record IDs to decide which state is authoritative.

9. Troubleshooting

Check	Why it matters	How to proceed
Start with a refresh	A refresh confirms whether the platform functions PDF view is stale or whether the backend rejected the action.	Refresh once, then repeat the exact search or selection. Do not repeat destructive actions until the latest state is visible.
Check Activity Logs	Successful admin actions should leave an audit trail for sensitive workflows.	Search by actor, affected user, entity ID, route, or timestamp. Use the log entry as confirmation, not

Check	Why it matters	How to proceed
		just the toast message.
Check Error Logs	Repeated UI failures usually have matching server or API errors.	Search around the action time. Capture the route, status, error summary, and request context for developer follow-up.
Escalate with evidence	Developer review is faster when the exact record and reproduction path are known.	Provide environment, route, selected filters, record ID, expected outcome, actual outcome, screenshot, and timestamp.

10. Best Practices

- Regenerate after major workflow changes.
- Inspect the downloaded PDF before use.
- Keep exports internal.
- Escalate repeated generation failures with logs and screenshots.

11. Completion Checklist

- The platform functions PDF page was reopened or refreshed after the change.
- The expected saved state remained visible after refresh.
- Related logs, downstream records, or generated artifacts agree with the visible page state.
- Any customer-facing wording, finding status, packet state, or support note was reviewed for factual and neutral language.
- Any unresolved risk, failed test, suspicious log, or unclear source evidence was escalated with record IDs and screenshots.
